

Favourites

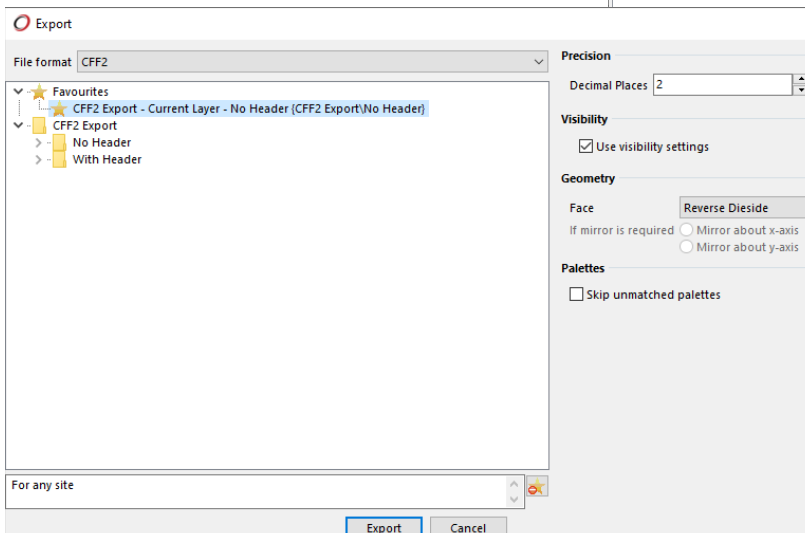

1. Wherever you see icon, you can use the 'favourites' mechanism.

2. For example, when running a dimension tool, or any Master Tool setting, you can add a setting to your 'favourites'.

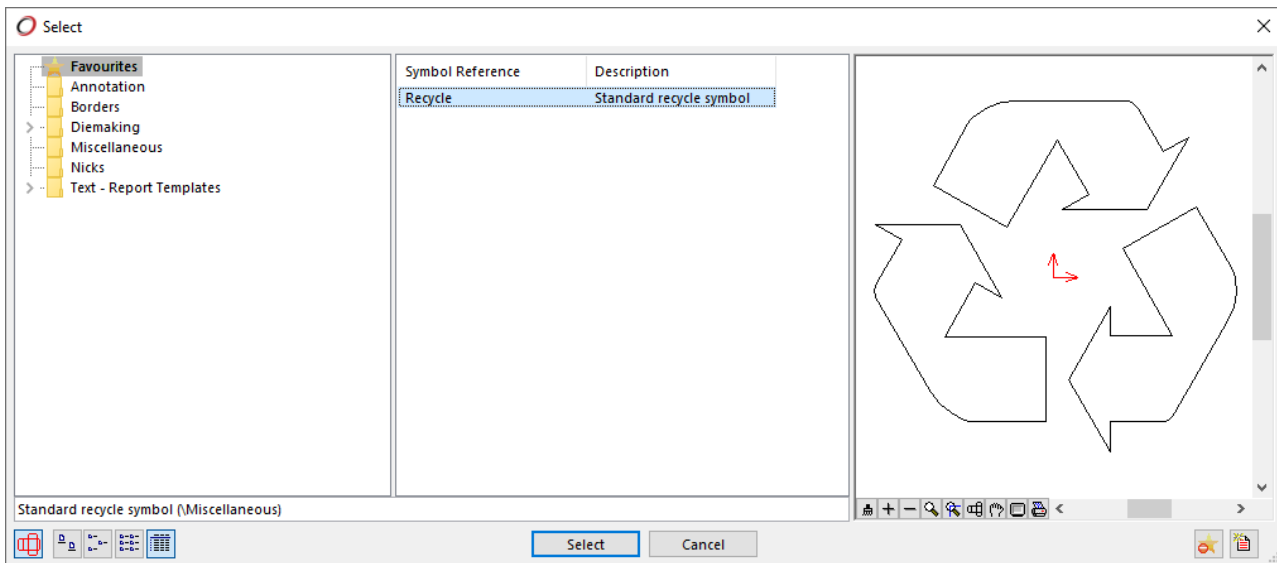

3. You can 'favourite' your standards.

4. Or 'favourite' your regularly used export settings when exporting a file.

5. And you can 'favourite' your most used symbols.

6. Wherever you add 'favourites' those items will then be available in the **Favourites** node in the respective place for easy access.

Quick Tip - Design Component Library Standard Toolbox

Inserting symbols, via **Block > Insert Symbol**, usually requires multiple clicks even after it's been added to your 'favourites'.

However, the **Design Components Library Standard Toolbox** gives you quick access to your Design Components AND Symbols.

Simply hover over the toolbox, click the **Favourites** node and then drag and drop onto the drawing.

Once you've made use of the **Favourites** node, the toolbox will default to selecting that folder, to make placing your 'favourite' symbols a one-click operation.
